

2021 CISO Priorities Flashcard

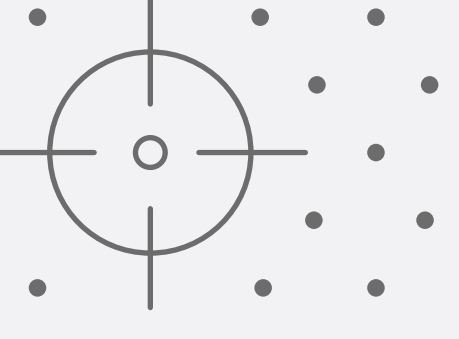

A CISO's list of responsibilities never gets any shorter. Prioritizing which tools and capabilities should be invested in is one of a CISO's core responsibilities. We've reached out to cybersecurity professionals to understand which initiatives they will be focusing their efforts in 2021.

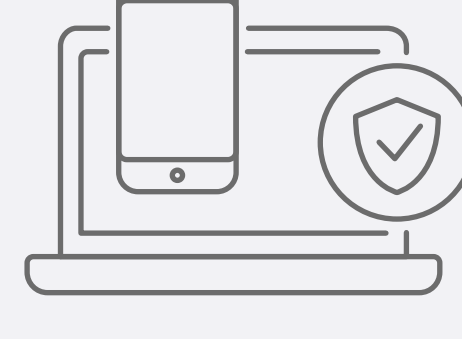

77%* are planning to prioritize **expanding threat visibility across all assets**.

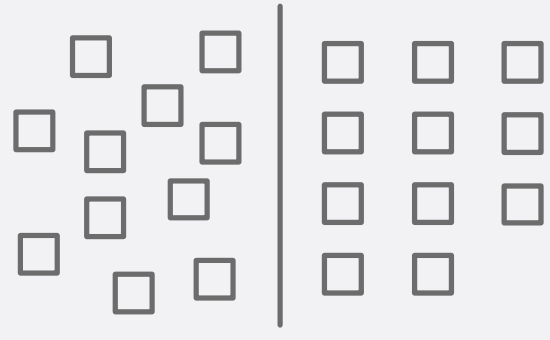

77%* of respondents say they plan to **optimize their SOC alert management systems**.

73%* of respondents will prioritize **threat hunting** in 2021.

72%* say they plan to **enhance cybersecurity testing beyond penetration testing**.

71%* still consider **data classification and protection** an area of focus in 2021.

70%* are waking up to the importance of making **measuring compromise** a priority in 2021.

66%*

declare **third-party assessment** a priority in the wake of the SolarWinds breach.

62%*

plan to prioritize **cybersecurity team skill set assessment** due to the shortage of trained cybersecurity talent.

56%*

think **passwordless authentication and simplifying cloud access controls** were priorities, making them the least popular projects.

The world is changing and cybersecurity professionals are transitioning with it. Cybersecurity organizations continue to be challenged by too many alerts, lack of real compromise intelligence, and competing priorities. But, in 2021, security leaders are starting to value solutions that **measure compromises, prioritize visibility over plain protection, and are determined to optimize their operations.**

Your Call to Action

Lumu is helping more than 1,000 organizations measure their unique level of compromise in real time. This means they have the intelligence to act quickly to minimize the impact of any compromises. In addition, by knowing their level of compromise they can determine which components of their cybersecurity system are underperforming and where additional investments are needed.
