

UNIBAN CASE STUDY

LOGISTICS NETWORK THREAT VISIBILITY: AGROINDUSTRIAL LOGISTICS COMPANY UNIBAN CASE STUDY

SUMMARY

Uniban is an agroindustrial and logistics company that produces and exports food products to large businesses and retailers in Europe and North America. They own a robust logistics network which includes food production, manufacturing materials, and storage systems, while also managing transportation and export logistics.

WHAT UNIBAN NEEDED

Ensuring the continuity of an operation like Uniban's involves having a modern cybersecurity strategy that provides unified logistics network threat visibility to proactively and efficiently protect a technological ecosystem in which IT/OT devices, remote devices, and complex networks coexist.

THE SOLUTION

During their trial with Lumu, Uniban realized they were able to achieve unified asset-level visibility across remote devices, regardless of their network connections. Encouraged by these results, Uniban decided to move one step further, by implementing Lumu Insights.

This provided a comprehensive understanding of their attack surface and the overall threat landscape they were dealing with. Shortly after implementing Insights, Uniban transitioned to Lumu Defender, which provided automation for incident response and the orchestration of their existing security controls.

BENEFITS OF LUMU

Quick Deployment and Extended Visibility: Lumu's enriched context quickly enabled Uniban to understand its threat landscape across IT/OT and remote devices.

Operational Workload Reduction: Lumu's automated response allowed Uniban to eliminate manual tasks and fully orchestrate its cybersecurity stack.

Robust Reporting Capabilities: meaningful and actionable information provided by Lumu's platform provided Uniban's cybersecurity team with the ability to share data and demonstrate the value of Lumu with their Board of Directors.

Early Threat Detection: thanks to Lumu's asset-level visibility and unified visibility, Uniban managed to tackle threats in the early stage before they became catastrophic events.

“With Lumu, we increased response precision and speed. In addition, the outstanding reporting capabilities are essential for the meetings with our management team and Board.”
