

Lumu for MSPs: Playback

Many MSP clients require log retention. Lumu Playback® is a feature that collects, analyzes, and stores network logs, turning them into actionable threat intelligence.

How Playback Works

Lumu for MSPs analyzes network metadata in real time to identify confirmed compromises. Playback takes this further by storing network data for up to two years and continuously cross-referencing it against emerging threats. This ensures MSPs can detect past compromises linked to evolving attack techniques.

Trusted by enterprises, Lumu Playback is now available for MSPs to enhance threat detection. By continuously correlating stored data with new threat intelligence, Playback helps identify novel threats and zero-day attacks. Findings are tagged in the Lumu Portal for easy identification, enabling faster incident response and deeper security insights.

Offload Noisy Logs to Lumu Playback

Lumu Playback offloads high-volume network logs like DNS, firewall, and proxy data, reducing storage costs while preserving full security visibility. It ensures continuous analysis of historical data against emerging threats, optimizing both cost and threat detection.

Key Benefits

Retrospective Threat Hunting

Even the newest, most sophisticated attacks leave clues. Lumu scans your historical logs for emerging IoCs, uncovering previously hidden threats and zero-day attacks.

Unlimited Self-Service Log Access

Your logs are always available. Query and analyze them anytime right from the Lumu for MSPs portal.

2-Year Log Retention Included

Maintain compliance and support investigations with up to 2 years of log storage.

Reduced Storage Costs

Offload your network logs to Lumu and eliminate the need to store duplicates, reducing costs and complexity.

Compliance Enablement

Playback ensures compliance with network logs storage requirements under a variety of frameworks.

Faster Incident Response

Quickly query historical data to pinpoint the source and scope of an attack, accelerating your response and minimizing damage.
