

# Lumu Discover for MSPs

As part of Lumu for MSPs, Discover provides full visibility into the external attack surface of any client or prospect so you can identify exposures, prioritize action, and deliver measurable value.

## Uncover What Adversaries Know About Your Clients

Discover 'Unknown' Internet facing assets.

Identify and remediate security gaps and misconfigurations.

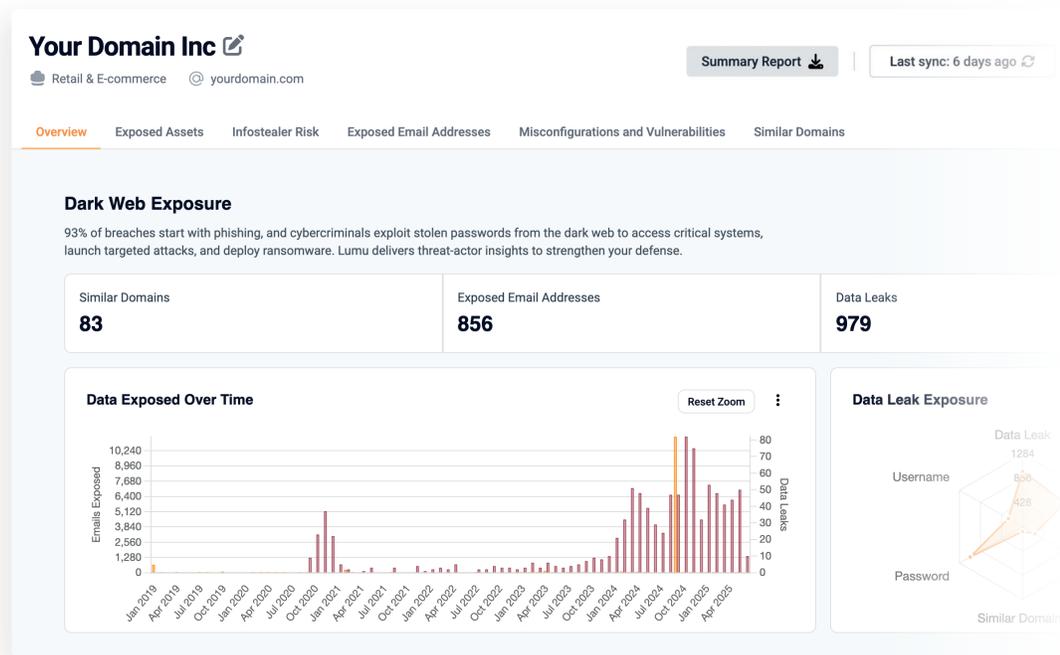

Identify clients at higher risk of BEC attacks.

Understand infostealer risk in your clients.

Uncover cyber risk for 3rd party vendors.

## Built for MSP Success

LUMU DISCOVER ENABLES YOU TO

Protect your customers with intelligence that **uncovers risk before it turns into an incident.**

Drive new business by using Discover during pre-sales assessments to **show prospects real, specific threats.**

Differentiate your services by **offering continuous surveillance, proactive reporting, and unique threat insights.**

Retain and grow accounts with data that **enhances quarterly business reviews and demonstrates your ongoing value.**

## Full Visibility of External Threats

Gain a 360 degree view of your clients' external attack surface with detailed information about how attackers are targeting your clients and which threats pose the highest risk.

## Key Capabilities

### Unmatched External Visibility

Pinpoint hidden risks that threaten your clients, including exposed infrastructure, leaked credentials, and dark web findings.

### Actionable Insights That Drive Retention

Deliver clear, evidence-based reporting that supports your security strategy and reinforces your value at every client touchpoint.

### Proactive Defense That Builds Trust

Prevent breaches and protect daily client operations by identifying threats early before they escalate.

### Seamless Integration

Lumu Discover works alongside your existing Lumu services to enhance detection, streamline remediation, and support your managed security offerings.
